contractlogix™

January 05, 2021

To Whom It May Concern,

It was my pleasure to work with Greg Smelkov on our software development at Contract Logix. Greg came to the team in September of 2019 as a software developer intern. He immediately picked up our technology and processes and was professional and reliable.

Greg worked as a full stack developer in a dynamic team environment leveraging various technologies, such as Visual Studio and JIRA to accomplish his day-to-day tasks. Greg was an active participant in the daily development scrums and bi-weekly sprint reviews. He performed equally well in both team environments and as an individual contributor.

Throughout his tenure, Greg learned and used different coding technologies in a real-world application development environment. This included Razor code, Angular, HTML5 and CSS to perform front-end code development and C#, SQL on the back end. Greg was exceptional at learning each syntax and applying this knowledge to our code and project. He implemented solutions that impact our customers requiring secure, robust contract management features using extensive data-driven logic. Greg also performed vulnerability scanning and vulnerability remediation on numerous occasions using Fortify.

Further, Greg participated in our S-SDLC process for all activities which included security training, code reviews and other development requirements.

I can say with confidence, Greg will add tremendous value to any development team or project.

If you have questions, please do not hesitate to contact me.

Sincerely,

Timothy Donaghy
Chief Technology Officer
Contract Logix, LLC
